A;Title: cDNA sequence for human erythrocyte ankyrin.
A;Reference number: A35049; MUID:90175370
A;Accession: B35049
ankyrin 1* erythrocyte splice form 2 - human N;Allernate, names: ankyrin 2.1, erythrocyte; N;Contains: ankyrin 2.2, erythrocyte C;Species: Hómo sapiens (man)
                                                                                                                                                                                                                                                                                                                                                                              B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 F;568-600/Domain:

T COKN2A mutations in Spanish cutaneous malignant melanoma fam patients with multiple melanomas and other neoplasia.";
L J. Med. Genet. 36:490-493(1999).

C -!- FUNCTION: INTERACTS STRONGLY WITH CDK4 AND CDK6. INHIBITS COLORS AND COLLD ACT AS A NEGATI REGULATOR OF THE PROLIFERATION OF NORMAL CELLS.

C -!- SUBUNIT: HETERODIMER WITH CDK4 OR CDK6.
C -!- DISEASE: CDKN2A MUTATIONS ARE INVOLVED IN TUMOR FORMATION WIDE RANGE OF TISSUES.

C -!- SIMILARITY: BELONGS TO THE CDKN2 FAMILY OF CYCLIN-DEPENDE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Soufir N., Avril M.-F., Chompret A., Spatz A., Stoppa-Lyonnet D., Benard J "Prevalence of p16 and CDK4 germline (families in France.";

Genôme 3:281-285(1992).

-1- FUNCTION: ATTACH INTEGRAL MEMBRANE PROTEINS TO CYTOSKELETAL ELEMENYS; BIND TO THE ERYTHROCYTE MEMBRANE PROTEIN BAND 4.2, THANK ATPASE, TO THE LYMPHOCYTE MEMBRANE PROTEIN GP85, AND TO TOTOSKELETAL PROTEINS FODRIN, TUBULIN, VIMENTIN AND DESMIN. ERYTHROCYTE AKVERINS ALSO LINK SPECTRIN (BETA CHAIN) TO THE CYTOPLASMIC DOMAIN OF THE ERYTHROCYTES ANION EXCHANGE PROTEIN; THEY RETAIN MOST OR ALL OF THESE BINDING FUNCTIONS.

-i- SUBCELLULAR LOCATION: CYTOPLASMIC SURFACE OF ERYTHROCYTIC PLASMA MEMBRANE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB
